

Factsheet

Working smarter with AI in Business Spend Management

Discover the Value of your Spend

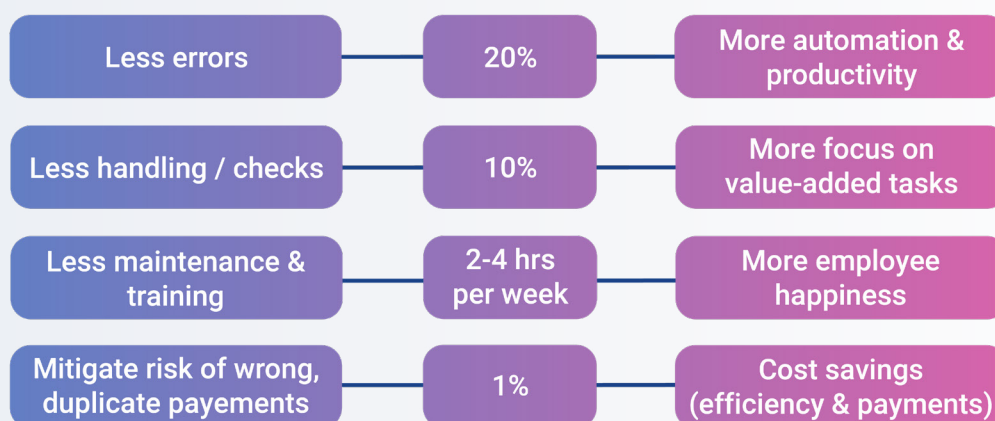

AI in BSM

By integrating AI into our Business Spend Management (BSM) platform, we help organizations do more with less. Improved document recognition brings concrete benefits: fewer errors, fewer manual checks, and significantly less time spent on maintenance or training.

The results?

Higher productivity, more focus on valuable tasks, and a demonstrable increase in employee satisfaction. In addition, incorrect or duplicate payments are significantly reduced, leading to direct cost savings.

Our AI technology is applicable to all common documents in the BSM domain, such as:

- Quotes
- Contracts
- Purchase orders
- Order confirmations
- Invoices
- Receipts

Collaborating with AI

Our AI is fully developed in-house and designed with security and scalability in mind.

- Recognizes documents in over 15 languages
- Works with unstructured documents such as PDFs and scans
- Self-learning system – minimal template maintenance required
- No dependency on external parties or data servers
- Fully integrated within Business Spend Management

Seeing is believing

Want to experience what AI can do for your organization? Request a free demo. We'll show you how our AI capabilities can speed up your invoice processing, reduce errors, and increase job satisfaction.
